RS-TR555 MECHANISM SERIES (AR350)

SPECIFICATIONS

■ CASSETTE DECK SECTION

Deck system	Stereo cassette deck
Track system	4-track, 2-channel
Recording system	AC bias
Bias frequency	80 kHz
Erasing system	AC erase
Heads	

Recording head (Permalloy) × 1
Playback head (Permalloy) × 1
Erasing head (Double-gap ferrite) × 1

Motors

Capstan drive (Quartz DD motor) × 1
Reel table drive (DC motor) × 1
Cassette holder open/close (DC motor) × 1

Tape speed	4.8 cm/sec.
Wow and flutter	0.03% (WRMS) ±0.09% (DIN)

Fast forward and rewind times

Approx. 100 seconds with C-60 cassette tape

Frequency response (Dolby NR off)

NORMAL	30 Hz~17 kHz, ±3 dB 20 Hz~18 kHz (DIN)
CrO₂	30 Hz~18 kHz, ±3 dB 20 Hz~19 kHz (DIN)
METAL	30 Hz~19 kHz, ±3 dB 20 Hz~20 kHz (DIN)

S/N (Signal level = max recording level, CrO₂ type tape)

NR off	57 dB (A weighted)
Dolby B NR on	66 dB (CCIR)
Dolby C NR on	74 dB (CCIR)

Input sensitivity and impedance

REC (IN)	60 mV/47 kΩ
-----------------	-------------

Output voltage and impedance

PLAY (OUT)	400 mV/800Ω
HEADPHONES	125 mV/(8Ω) (Load impedance 8Ω~600Ω)

■ GENERAL

Power consumption	22 W
--------------------------	------

Power supply

For (GC) area	AC 50 Hz/60 Hz, 110 V/127 V/220 V/240 V
For others	AC 50 Hz/60 Hz, 230 V~240 V

Dimensions (W×H×D)	430×135×300 mm
---------------------------	----------------

Weight	5.3 kg
---------------	--------

Note:

Specifications are subject to change without notice.
Weight and dimensions are approximate.

※ TECHNICAL INFORMATION

This technical information is located on pp 45-51 of the RS-B555 Service Manual (Order No. AD8907231C5).

Therefore, refer to that Service Manual.

There is a few differences in this schematic diagram.

But this is the same as RS-B555 basically.

CONNECTIONS

Make connections in the numbered sequence by using the included cables.

① Connect the stereo connection cables.

Stereo connection cable

White (L) 
Red (R) 

② Connect the AC power supply cord.

AC power supply cord ②

The configuration of the AC outlet and AC power supply cord differs according to area.

For (EB) area

Cut off and dispose of the plug and replace with a suitable plug.

For (GC) area

If the power plug will not fit your socket, use the power plug adaptor (included).

Placement hints

If this unit is placed near a amplifier or a tuner, a "hum" noise may be heard during tape playback, recording, or AM reception of the amplifier or the tuner.

If this occurs, leave as much space as possible between the units, or place them where is the least amount of "hum".

Note:

This unit is a precision instrument. Be sure to place it on a flat surface.

ACCESSORIES

- Stereo connection cables (SJP2276) 2 pcs.

- AC power supply cord
 (RJA0004) (GC)
 (RJA0019-1K) (EG) 1 pc.
 (SJA173) (GN)
 (SJA193) (EB)

- Power plug adaptor (SJP9215) 1 pc.
 (For GC area)

- Remote control transmitter (RAK-RS305W) 1 pc.

- Remote control batteries 2 pcs.
 <UM-4, "AAA" (R03)>

Note: The configuration of the AC power supply cord differs according to area.

REMOTE CONTROL TRANSMITTER

Insertion of remote control batteries

Battery life is about 1 year.

Notes concerning use of batteries

- Do not use chargeable batteries (Ni-Cd type).
- Be sure the batteries are inserted so that the positive (+) and negative (-) polarities are correct. Batteries installed with incorrect polarities may leak and damage the remote control transmitter.
- Never subject the batteries to excessive heat or flame; do not attempt to disassemble them; and be sure they are not short-circuited.
- If the remote control transmitter is not to be used for a long time, remove the batteries and store them in a cool dark place.
- Remove old, weak or worn-out batteries promptly and dispose of them.
- Never mix old and new batteries, nor batteries of different types (carbon or alkaline).

Remote control transmitter operation notes

Note that operation may not be correct if direct sunlight or other strong light strikes the remote control signal sensor. If there is a problem, place the unit away from the direct sunlight or other strong light source.

Face it toward the remote control signal sensor.

Use the remote control transmitter within 6 meters.

Be sure the transmitter part of the remote control transmitter and the remote control signal sensor are free from dust. Excessive dust might prevent reception.

Notes:

- The control panel of the remote control transmitter may be covered by a clear plastic protective sheet. This sheet may be removed if desired.
- If this unit is installed in a rack with glass doors, the glass door's thickness or color might make it necessary to use the remote control transmitter a shorter distance from the unit.
- Do not use a remote control transmitter for a TV set, VCR or other component at the same time as this unit's remote control transmitter is being used, because this could result in an operation error.

LOCATION OF CONTROLS

The functions indicated by the white numbers (with black background, ② etc.) can be also activated using the remote control transmitter.

Control section I

- ① **Power "STANDBY ⏻ /ON" switch (POWER \blacksquare STANDBY ⏻ \blacksquare ON)**
This switch switches ON and OFF the secondary circuit power only. The unit is in the "standby" condition when this switch is set to the STANDBY ⏻ position. Regardless of the switch setting, the primary circuit is always "live" as long as the power cord is connected to an electrical outlet.
- ② **Open/close button (\blacktriangle OPEN/CLOSE)**
This button can be used to open or close the cassette holder.
- ③ **Cassette holder**
- ④ **Indicators section**
(Refer to page 6.)
- ⑤ **Remote control signal sensor**
- ⑥ **Monitor switch (MONITOR)**
In order to monitor the tape (check the recording condition), the sound on the tape (immediately after recording) and the sound of the sound source (the original sound, before recording) can be alternately selected by pressing this button. (The corresponding indicator will illuminate.)
- ⑦ **Recording-level control (REC LEVEL)**
This control can be used to regulate the recording level.
- ⑧ **Recording-balance control (BALANCE)**
This control can be used to balance the left and right sound levels during recording.
- ⑨ **Calibration-level control (REC CAL. LEVEL)**
The sensitivity differences (high or low recording levels) for each tape type can be corrected by using these controls.
- ⑩ **Calibration-bias control (REC CAL. BIAS)**
The frequency response for each tape type can be equalized by using this control.
- ⑪ **Operation section**
(Refer to "Control section II" on page 5.)
- ⑫ **Headphones jack (PHONES)**
- ⑬ **Headphones volume control (PHONES LEVEL)**

Control section II

⑭ Timer switch (☐ TIMER)

This switch is used to automatically begin a tape recording or tape playback at a certain time, selected by a timer (not included).

⑮ Counter buttons (COUNTER RESET, MODE)

RESET: This button can be used to reset the tape/linear counter indication to "000_/00.00".

MODE: This button can be used to select the tape/linear counter indication.

⑯ Memory-mode button (MEMORY REPEAT/STOP)

REPEAT: This button can be used to set this unit to the "A-B repeat" mode.

STOP: This button can be used to rewind the tape to the preset "000_/00.00" point when the rewind (◀◀) button is pressed.

⑰ Meter-range selector (METER RANGE)

This selector can be used to select the meter-range display of the input level meter.

⑱ Calibration selector (REC CAL.)

This selector can switch the input level display between the level adjustment indicator and bias adjustment indicator.

⑲ APRS button (APRS)

This button can be used to hold the peak level while monitoring the input sound.

⑳ Multiplex filter switch (MPX FILTER)

This prevents the Dolby NR circuit from operating in error when FM stereo broadcasts are recorded using the noise reduction function.

㉑ Dolby noise-reduction buttons (B-DOLBY NR-C)

These buttons can be used to reduce the hiss noise that is characteristic of tape. This unit is provided with both the Dolby B type and C type noise-reduction systems.

㉒ Record button and indicator (● REC)

This button can be used to change the tape deck to the recording stand-by mode.

㉓ Automatic-record-muting button (○ AUTO REC MUTE)

This button can be used to make a silent interval on the tape being recorded on tape deck.

㉔ Pause button (|| PAUSE)

This button can be used to temporarily stop the tape playback or recording of tape deck.

㉕ Rewind/fast-forward/search buttons (◀◀ REW, ▶▶ FF, [TPS])

These buttons can be used to fast forward or rewind the tape, or to easily search for the tune's beginning of the tape quickly.

㉖ Playback button and indicator (▶ PLAY)

This button can be used to start the playback or recording of the cassette.

(The tape will then begin moving in the left-to-right direction.) When this indicator illuminates steadily, it indicates that this tape deck is in the playback mode or the recording mode. When it flashes continually, this is an indication that this tape deck is in the pause mode or the recording stand-by mode.

㉗ Stop button (■ STOP)

This button can be used to stop tape movement.

Indicators section

- 28 Input level meter**
During playback, this meter indicates the level of the recorded sound.
During recording, it indicates the level being recorded, adjusted by the recording-level control.
- 29 Bias adjustment indicator (BIAS CAL.)**
Indicates that the bias can now be adjusted.
- 30 Level adjustment indicator (LEVEL CAL.)**
Indicates that the recording level can now be adjusted.
- 31 Monitor indicators (SOURCE, TAPE)**
Each indicator illuminates to show which of the monitor was set by the monitor switch.
- 32 Dolby noise-reduction indicators (B, C)**
Each indicator illuminates to show the type of Dolby noise-reduction system selected by pressing one of the Dolby noise-reduction buttons.
- 33 Multiplex filter indicator (MPX)**
Illuminates to indicate that the multiplex filter is set to "ON".
- 34 APRS indicator (APRS)**
Illuminates to indicate that the "APRS" is set to "on" in the recording stand-by mode.
- 35 Tape-select indicators (I/NORMAL, II/CrO₂, IV/METAL)**
The type of tape being used will be automatically detected and the indicator will illuminate.
- 36 Memory-mode indicators (MEMORY REPEAT, MEMORY STOP)**
Each indicator illuminates to show which of the memory modes was set by the memory-mode button.
- 37 Tape/Linear counter**
Indicates the amount of tape movement or elapsed time.

DISASSEMBLY INSTRUCTIONS

"ATTENTION SERVICER"

Some chassis components may have sharp edges. Be careful when disassembling and servicing.

Ref. No. 1	Removal of the cabinet	Ref. No. 2	Removal of the main P.C.B.
Procedure 1	 <p>• Remove the 6 screws (①~⑥).</p>	Procedure 1→2	<p>1. Remove the 6 screws (①~⑥). 2. Remove the rear panel from the projection of the bottom board.</p> 
	<p>3. Remove the 6 screws (⑦~⑫). 4. Remove the 2 connectors (CP1, CP2). 5. Remove the 2 flat cables (CN2P, CN60). 6. Remove the main P.C.B. in the direction of arrow.</p>		
	<p>How to remove the flat cable</p> 		
	<p>How to check the main P.C.B.</p> <ul style="list-style-type: none"> When checking the soldered surfaces of main P.C.B. and replacing the parts, do as show. <p>1. Remove the 9 screws (⑬, ⑭, ⑮, ⑯~⑳) in above figure. 2. Remove the 8 screws (㉑~㉔). 3. Remove the front panel ass'y in the direction of arrow ①.</p> 		<p>4. Remove the bottom board in the direction of arrow ②. 5. Reinstall the front panel ass'y to the main P.C.B.</p> 

Ref. No.
3

Removal of the front panel ass'y

Procedure
1→3

1. Remove the 6 screws (①~⑥).

2. Remove the 2 connectors (CP1, CP2).
3. Remove the 1 flat cable (CN60).
4. Remove the boss from bottom chassis.
5. Remove the front panel ass'y in the direction of arrow.

Ref. No.
4

Removal of the FL drive P.C.B.

Procedure
1→3→4

1. Pull out the rec level knob.
2. Remove the nut.

How to remove the flat cable

- Pull out the flat cable while pressing the connector.

3. Remove the 2 flat cables (CN40, J971).
4. Remove the 1 screw (①).
5. Release the 5 claws.
6. Remove the FL drive P.C.B. in the direction of arrow.

Ref. No.
5

Removal of the operation P.C.B.

Procedure
1→3→4→5

1. Pull out the 4 knobs.

2. Remove the 7 screws (①~⑦).
3. Remove the 9 claws.

Ref. No. 6	Removal of the rec level P.C.B.	Ref. No. 7	Removal of the mechanism unit
Procedure 1→3→4→6	 <p>FL drive P.C.B.</p> <p>Rec level P.C.B.</p> <p>• Remove the rec level P.C.B. in the direction of arrow.</p>	Procedure 1→3→7	 <p>1. Turn the pulley gear in the direction of arrow, and open the cassette holder ass'y</p> <p>2. Remove the 2 flat cables (CN40, J971).</p> <p>3. Remove the 4 screws (①~④).</p>

20

Removal of the intermediate gear, leaf switch lever-A, leaf switch lever-B, and leaf switch lever-C

Procedure
1→3→7→8
→18→19→20

■ Removal of the intermediate gear

1. Release the 2 claws.
2. Remove the intermediate gear in the direction of arrow ①.

■ Removal of the leaf switch lever-A

- Release the 1 claw.

■ Removal of the leaf switch lever-B

- Release the 1 claw.

■ Removal of the leaf switch lever-C

- Release the 1 claw.

Ref. No.
21

Installation of the drive gear and drive sector lever

Procedure
21

■ Installation of the drive gear

1. Push the leaf switch lever-A in the direction of arrow.
2. Place the drive gear as shown below and then install it in the loading base ass'y.

■ Installation of the drive sector lever

1. Temporarily install the open spring in the drive sector lever.

2. Install the loading angle in the loading base ass'y and then secure it with the 1 screw (②).
3. Push the leaf switch lever-C in the direction of arrow.
4. Secure the drive sector lever with 1 screw (①).
5. Engage the open spring in the claw of the loading base ass'y.

MEASUREMENT AND ADJUSTMENT METHODS

Measurement Condition

- Rec. level control; Maximum
- Timer switch; Off
- MPX filter switch; off
- Calibration-bias control; Center
- Rec. balance control; Center

- Calibration-level control; Center
- Dolby NR switch; Off
- Make sure heads are clean
- Make sure capstan and pressure roller are clean
- Judgeable room temperature $20 \pm 5^{\circ}\text{C}$ ($68 \pm 9^{\circ}\text{F}$)

Measuring instrument

- EVM (Electronic Voltmeter)
- Oscilloscope
- Digital frequency counter
- AF oscillator

- ATT (Attenuator)
- Resistor (600Ω)

Test tape

- Head azimuth adjustment (8kHz, -20dB); QZZCFM
- Playback gain adjustment (315Hz, 0dB); QZZCFM
- Playback frequency response (315Hz, 12.5kHz, 10kHz, 8kHz, 4kHz, 1kHz, 250Hz, 125Hz, 63Hz, -20dB); QZZCFM

- Overall frequency response, Overall gain adjustment, AC Bias trap adjustment, Erase current adjustment, HX Pro adjustment, Rec. cal. adjustment
- Normal reference black tape; QZZCRA
- CrO_2 reference blank tape; QZZCRX
- Metal reference blank tape; QZZCRZ

Adjustment Points

■ Replacing, Installing and Adjusting the Head

Adjustment Screws and Head Screws

1. Remove the head by removing the two head screws (see Fig. 1).
2. Install the head with the two head screws, holding the head facing in the direction of arrow 1 (toward the left) (see Fig. 1).
3. Install the head alignment gauge (QZZ0207) in the mechanism and set the unit to the play mode.
4. With the check bar, check if it comes in contact with the head. (See Figs. 2 and 3)

Fig. 1

Fig. 2

Fig. 3

- * If the check bar and head do not come in contact, adjust the head with the "Tilt Adjustment Screw".
- 5. With the check bar, make sure that the check bar and tape guide do not come in contact, and visually check that the head is placed horizontally (azimuth aligned).
- * If the check bar comes in contact with the tape guide, make adjustments as follows. (See Fig. 4.)

[If the check bar comes in contact with the top of the tape guide:]

Turn screw H (height adjustment screw) clockwise (as shown in Fig. 1) until the check bar does not come in contact with the tape guide. Then turn screw T (tilt adjustment screw) in the same way as screw H was turned. Finally, turn screw A (azimuth alignment screw) counterclockwise as many degrees as screws H and T were turned.

[If the check bar comes in contact with the bottom of the tape guide:]

Turn screw H (height adjustment screw) counterclockwise until the check bar does not come in contact with the tape guide. Then turn screw T (tilt adjustment screw) in the same way as screw H was turned. Finally, turn screw A (azimuth alignment screw) clockwise as many degrees as screws H and T were turned.

Fig. 4

6. With the check bar, make sure that the check bar does not come in contact with the tape guide on pinch arm S. If it does, make adjustment with a hex wrench (1.27 mm) until the check bar does not come in contact with the pinch arm.

7. Then, with the check bar, make sure that the check bar does not come in contact with the tape guide. If it does, turn the screw as shown in Fig. 5 until the check bar does not come in contact with the tape guide.
8. After making these adjustments, insert a tape with the mirror (QZZCRD) and play back the tape. Check if the tape runs smoothly (i.e. does not get twisted).
9. Follow "Head Azimuth Adjustment" procedures on page 19.
10. After following the adjustment procedures, repeat steps 3 to 10 and check if trouble occurs (if it does, remedy it).

Fig. 5

■ Adjustment procedures when replacing "Pinch Arm S"

1. Install the head alignment gauge and set the play mode.
2. Adjust the height of the pinch arm with the check bar, using the height of tape guide on the head as reference.

■ If the already adjusted "Screw H (Height Adjustment Screw) and Screw T (Tilt Adjustment Screw)" are wrongly turned

- Install the head alignment gauge (QZZ0207), set the play mode, and turn screws H and T until the check bar does not come in contact with the tape guide on the head.
- Then, follows steps 1 to 10 in "Replacing, Installing and Adjusting the Head".

HEAD AZIMUTH ADJUSTMENT

1. Playback the azimuth adjustment portion (8 kHz, -20 dB) of the test tape (QZZCFM). Vary the azimuth adjusting screw until the output of the R-CH are maximized.
2. Perform the same adjustment in the play mode.
3. After the adjustment, apply screwlock to the azimuth adjusting screw.

Fig. 6

Fig. 7

PLAYBACK GAIN ADJUSTMENT

1. Playback the gain adjusted portion (315 Hz, 0 dB) of the test tape (QZZCFM).
2. Adjust VR3 (L-CH) and VR4 (R-CH) so that the output is within the standard value.

Standard value: $0.4V \pm 0.5dB$

Fig. 8

PLAYBACK FREQUENCY RESPONSE

1. Playback the frequency response portion (315Hz, 12.5kHz~63Hz, -20dB) of the test tape (QZZCFM).
2. Assure that the frequency response is within the range shown in Fig. 10 for both L-CH and R-CH.

Fig. 9

Fig. 10

AC BIAS TRAP ADJUSTMENT

1. Insert the Metal blank test tape (QZZCRZ) and set the unit to the Record mode.
2. Adjust L1 (L-CH) [[L2 (R-CH)]] so that the output voltage between TP3 (TP4) and GND is less than the minimum value.

Fig. 11

ERASE CURRENT ADJUSTMENT

1. Insert the Metal blank test tape (QZZCRZ) and set the unit to the Record Pause mode.
2. Adjust VR303 so that the output between TP1 and GND is within the standard value.

Standard value: $190 \pm 5mA$ (Metal)...EVM Reading: $190 \pm 5mV$

Fig. 12

HX PRO ADJUSTMENT

1. Insert the Metal blank tape (QZZCRZ) and set the unit to the Record Pause mode.
2. Connect a DC voltmeter across TP5 (L-CH) and GND, TP6 (R-CH) and GND.
3. Adjust L301 (L-CH) and L302 (R-CH) so that the output is the minimum value.

Fig. 13

OVERALL FREQUENCY RESPONSE

1. Insert the normal blank test tape (QZZCRA) and set the unit to the record pause mode.
2. Apply a reference input signal (1 kHz, -24 dB) through an attenuator.
3. Attenuate the signal by 20 dB and adjust the frequency from 50 Hz ~ 10 kHz.
4. Record the frequency sweep.
5. Playback the recorded signal and assure that it is within the range shown in Fig. 15 in comparison to the reference frequency (1 kHz).
6. If it is not within the standard range, adjust VR301 (L-CH) and VR302 (R-CH) so that the frequency level is within the standard range.
 - Level up in high frequency range Increase the bias current.
 - Level down in high frequency range ... Decrease the bias current.
7. Repeat steps 2~6 above using the CrO₂ tape (QZZCRX) and the metal tape (QZZCRZ) increasing the frequency range to 12.5 kHz (50 Hz ~ 12.5 kHz).
8. Assure that the level is within the range shown in Fig. 16.

Fig. 14

Normal Overall frequency response chart (NR OUT)

Fig. 15

CrO₂-Metal Overall frequency response chart (NR OUT)

Fig. 16

OVERALL GAIN ADJUSTMENT

1. Insert the normal blank test tape (QZZCRA) and set the unit to the record pause mode.
2. Apply a reference input signal (1 kHz, -24 dB). Attenuate the output so that its level becomes 0.4 V.
3. Record this input signal.
4. Playback the signal recorded in step 3 above, and assure that the output is within the standard value.
5. If it is not within the standard value, adjust VR5 (L-CH) and VR6 (R-CH).
6. Repeat the step 2~5 above until the output is within the standard value.

Standard value: 0.4 V ± 0.5 dB

Fig. 17

REC CAL. ADJUSTMENT

1. After the overall frequency characteristics and over all gain are adjusted, insert the test tape (QZZCRA) in the unit and then set the recording mode (REC/PLAY).

— Level Adjustment —

2. First, press the REC CAL button. (The indication "LEVEL CAL" will appear in the FL meter.)
3. Adjust VR10 so that the level of the right and left channels reach the Δ mark as shown.

— Bias Adjustment —

4. Next, press the REC CAL button again. ("BIAS CAL" will be displayed in the FL meter.)
5. Adjust VR9 so that the indication of the left channel level reaches the Δ mark as shown.

Fig. 18

Fig. 19

Note: Unless the overall frequency and overall gain are adjusted so that the L/R channel levels are the same, there will be a difference between the L/R channels levels in the level and bias adjustments.

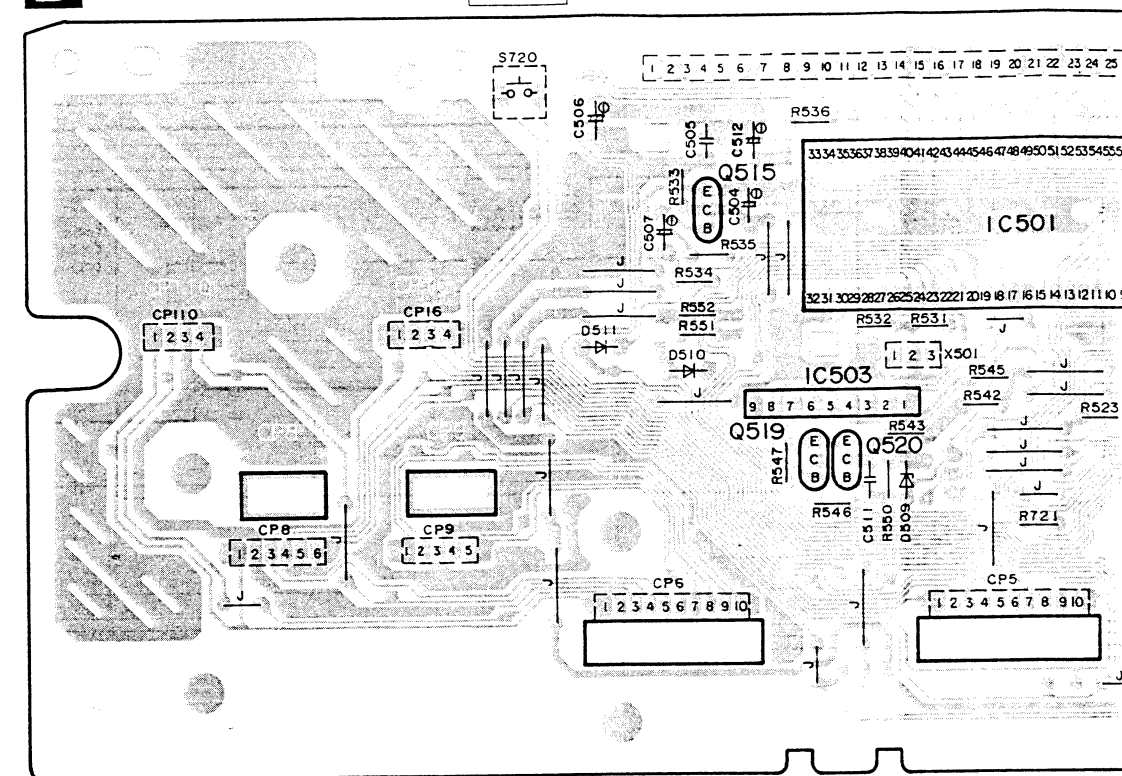

■ TERMINAL FUNCTION OF IC'S

• IC501 (M50942-518SP): MICROCOMPUTER (This microcomputer is used for mechanical/FL DRIVE operation.)

Pin No.	Mark	I/O Division	Function
1	V _{REF}	I	A/D converter reference voltage (Connected to AV _{CC})
2	KEY1	I	Key switch (STOP, FF, REW, PLAY, REC, PAUSE, Dolby B, C, MPX, T-PLAY, T-REC)
3	KEY2	I	Key switch (C-RESET, C-MODE, M-RANGE, MEMORY, ARM, APRS, REC CAL)
4	Lch	I	Lch indication level input
5	Rch	I	Rch indication level input
6	APRS	I	Input Vol. position det. for APRS
7	R. INH	I	Motor switch, rec. inh. switch (Motor switch OFF: 0V, Rec. OK: 1.5V, NG: 5V)
8	TAPE	I	OPEN switch, ATS switch input (OPEN: 0V, Nor: 1.1V, CrO ₂ : 2.4V, Metal: 5V)
9	RPT	I	Reel table (take up side) rotary det.
10	CAPM	O	Capstan motor ON/OFF control (ON: "H", OFF: "L")
11	RMR	O	Reel motor ON/OFF control (REW, R-TPS: "H", Others: "L")
12	RMF	O	Reel motor ON/OFF control ((REC) PLAY, FF, F-TPS: "H", Others: "L")
13	T. SOL	O	Trigger solenoid ON/OFF control (ON: "H", OFF: "L")
14	B. SOL	O	Brake solenoid ON/OFF control (FF/REW/TPS: "H", Others: "L")
15	C/R SOL	O	Brake solenoid keep and reel motor speed select (FF/REW/TPS: "H", Others: "L")
16	EJECT R	O	Eject motor ON/OFF control (OPEN: "H", Others: "L")
17	EJECT F	O	Eject motor ON/OFF control (CLOSE: "H", Others: "L")
18	DMT	O	Line out muting control (ON: "H", OFF: "L")
19	RMT	O	Rec amp muting control (ON: "H", OFF: "L")

Pin No.	Mark	I/O Division	Function
20	CLOCK	O	Serial clock for amp, logic control (MPX, C, B, T/S, PLAY, REC, CALF, OSCON)
21	DATA	O	Serial data for amp, logic control (MPX, C, B, T/S, PLAY, REC, CALF, OSCON)
22	EJTSEL	I	Model select terminal (Always: "H")
23	CNTSEL	I	Model select terminal (Always: "H")
24	POF	I	Power off det. (OFF: "L")
25	REM	I	Remote control signal
26	CNV _{SS}	I	Connected to V _{SS}
27	RESET	I	Reset input (Normal: "H", Reset: "L")
28	X _{IN}	I	Clock OSC terminal (4MHz)
29	X _{OUT}	O	
30	X _{CIN}	I	Not used, connected to V _{SS}
31	X _{COUT}	O	Not used
32	V _{SS}	I	GND terminal
33	φ	O	Not used
34	RPS	I	Reel table (supply side) rotary det.
35	MSP	I	TPS (MS) det. (No signal: "H", Signal ON: "L")
36	MODE	I	Mech. mode switch ((REC) PLAY, TPS: "L", Others: "H")
37	HALF	I	Mech. half switch (ON: "L", OFF: "H")
38	VP	I	Reference voltage terminal
39 }	G1 }	O	FL grid control signal
44	G6		
45 }	S1 }	O	FL segment control signal
62	S18		
63	AV _{CC}	I	Power supply terminal for A/D converter
64	V _{CC}	I	Power supply terminal for micro computer

A MAIN P.C.B. (REP1299A-M)

B POWER SUPPLY P.C.B. For (EB,EG,GN) areas. (REPI011J-P
REPI011L-P)

SCHEMATIC DIAGRAM (Parts list on pages 44~48.)

(This schematic diagram may be modified at any time with development of new technology.)

Notes:

- JK703: Voltage selector in "240V" position. (For [GC] area.) (110V → 127V → 220V → 240V)
- S701: Stop switch (■ STOP).
- S702: Fast-forward switch (TPS ▶▶).
- S703: Rewind switch (◀◀ TPS).
- S704: Playback switch (▶ PLAY).
- S705: Record switch (● REC).
- S706: Pause switch (■ PAUSE).
- S707: Dolby noise-reduction switch (Dolby NR; C).
- S708: Dolby noise-reduction switch (Dolby NR; B).
- S709: Multiplex filter switch (MPX FILTER).
- S710: Counter reset switch (COUNTER RESET).
- S711: Counter mode switch (COUNTER MODE).
- S712: Meter-range selector switch (METER RANGE).
- S713: Memory mode switch (MEMORY REPEAT/STOP).
- S714: APRS switch (APRS).
- S715: Automatic-record-muting switch (● AUTO REC MUTE).
- S716: Timer switch in "off" position (□ TIMER).
- S717: Calibration selector switch (REC CAL).
- S718: Open/close switch (▲ OPEN/CLOSE).
- S719: Power switch in "on" position (POWER ■ standby ○ = ON).
- S720: Monitor switch (MONITOR).
- S791: Motor switch in "off" position. (Loading)
- S792: Open switch in "off" position. (Loading)
- S971: Mode switch in "off" position.
- S972: Cassette half detection switch in "off" position.
- S973: ATS (CrO₂) switch in "off" position.
- S975: Rec. inhibit switch in "off" position.
- S976: ATS (Metal) switch in "off" position.
- Resistance are in ohms (Ω), 1/4 watt unless specified otherwise.
1K=1,000 (Ω), 1M=1,000k (Ω)
- Capacity are in micro-farads (μF) unless specified otherwise.
- All voltage values shown in circuitry are under no signal condition and playback mode with volume control at minimum position otherwise specified.
- ().....Voltage values at record mode.
- For measurement us EVM.
- Important safety notice
Components identified by Δ mark have special characteristics important for safety.
When replacing any of these components, use only manufacturer's specified parts
- (———— + B ————) indicates + B (bias).
- (———— - B ————) indicates - B (bias).
- (————) indicates the flow of the playback signal.
- (————) indicates the flow of the record signal.
- The supply part number is described alone in the replacement parts list.

Ref. No.	Production Part No.	Supply part No.
IC2, 701, 702, 901, 902, 903, 906	M5218AL	M5218L
IC203	SN74LS74AMEL	SN74LS74AM
Z701	RCDHC-278-E	RCDHC-278

* Caution !

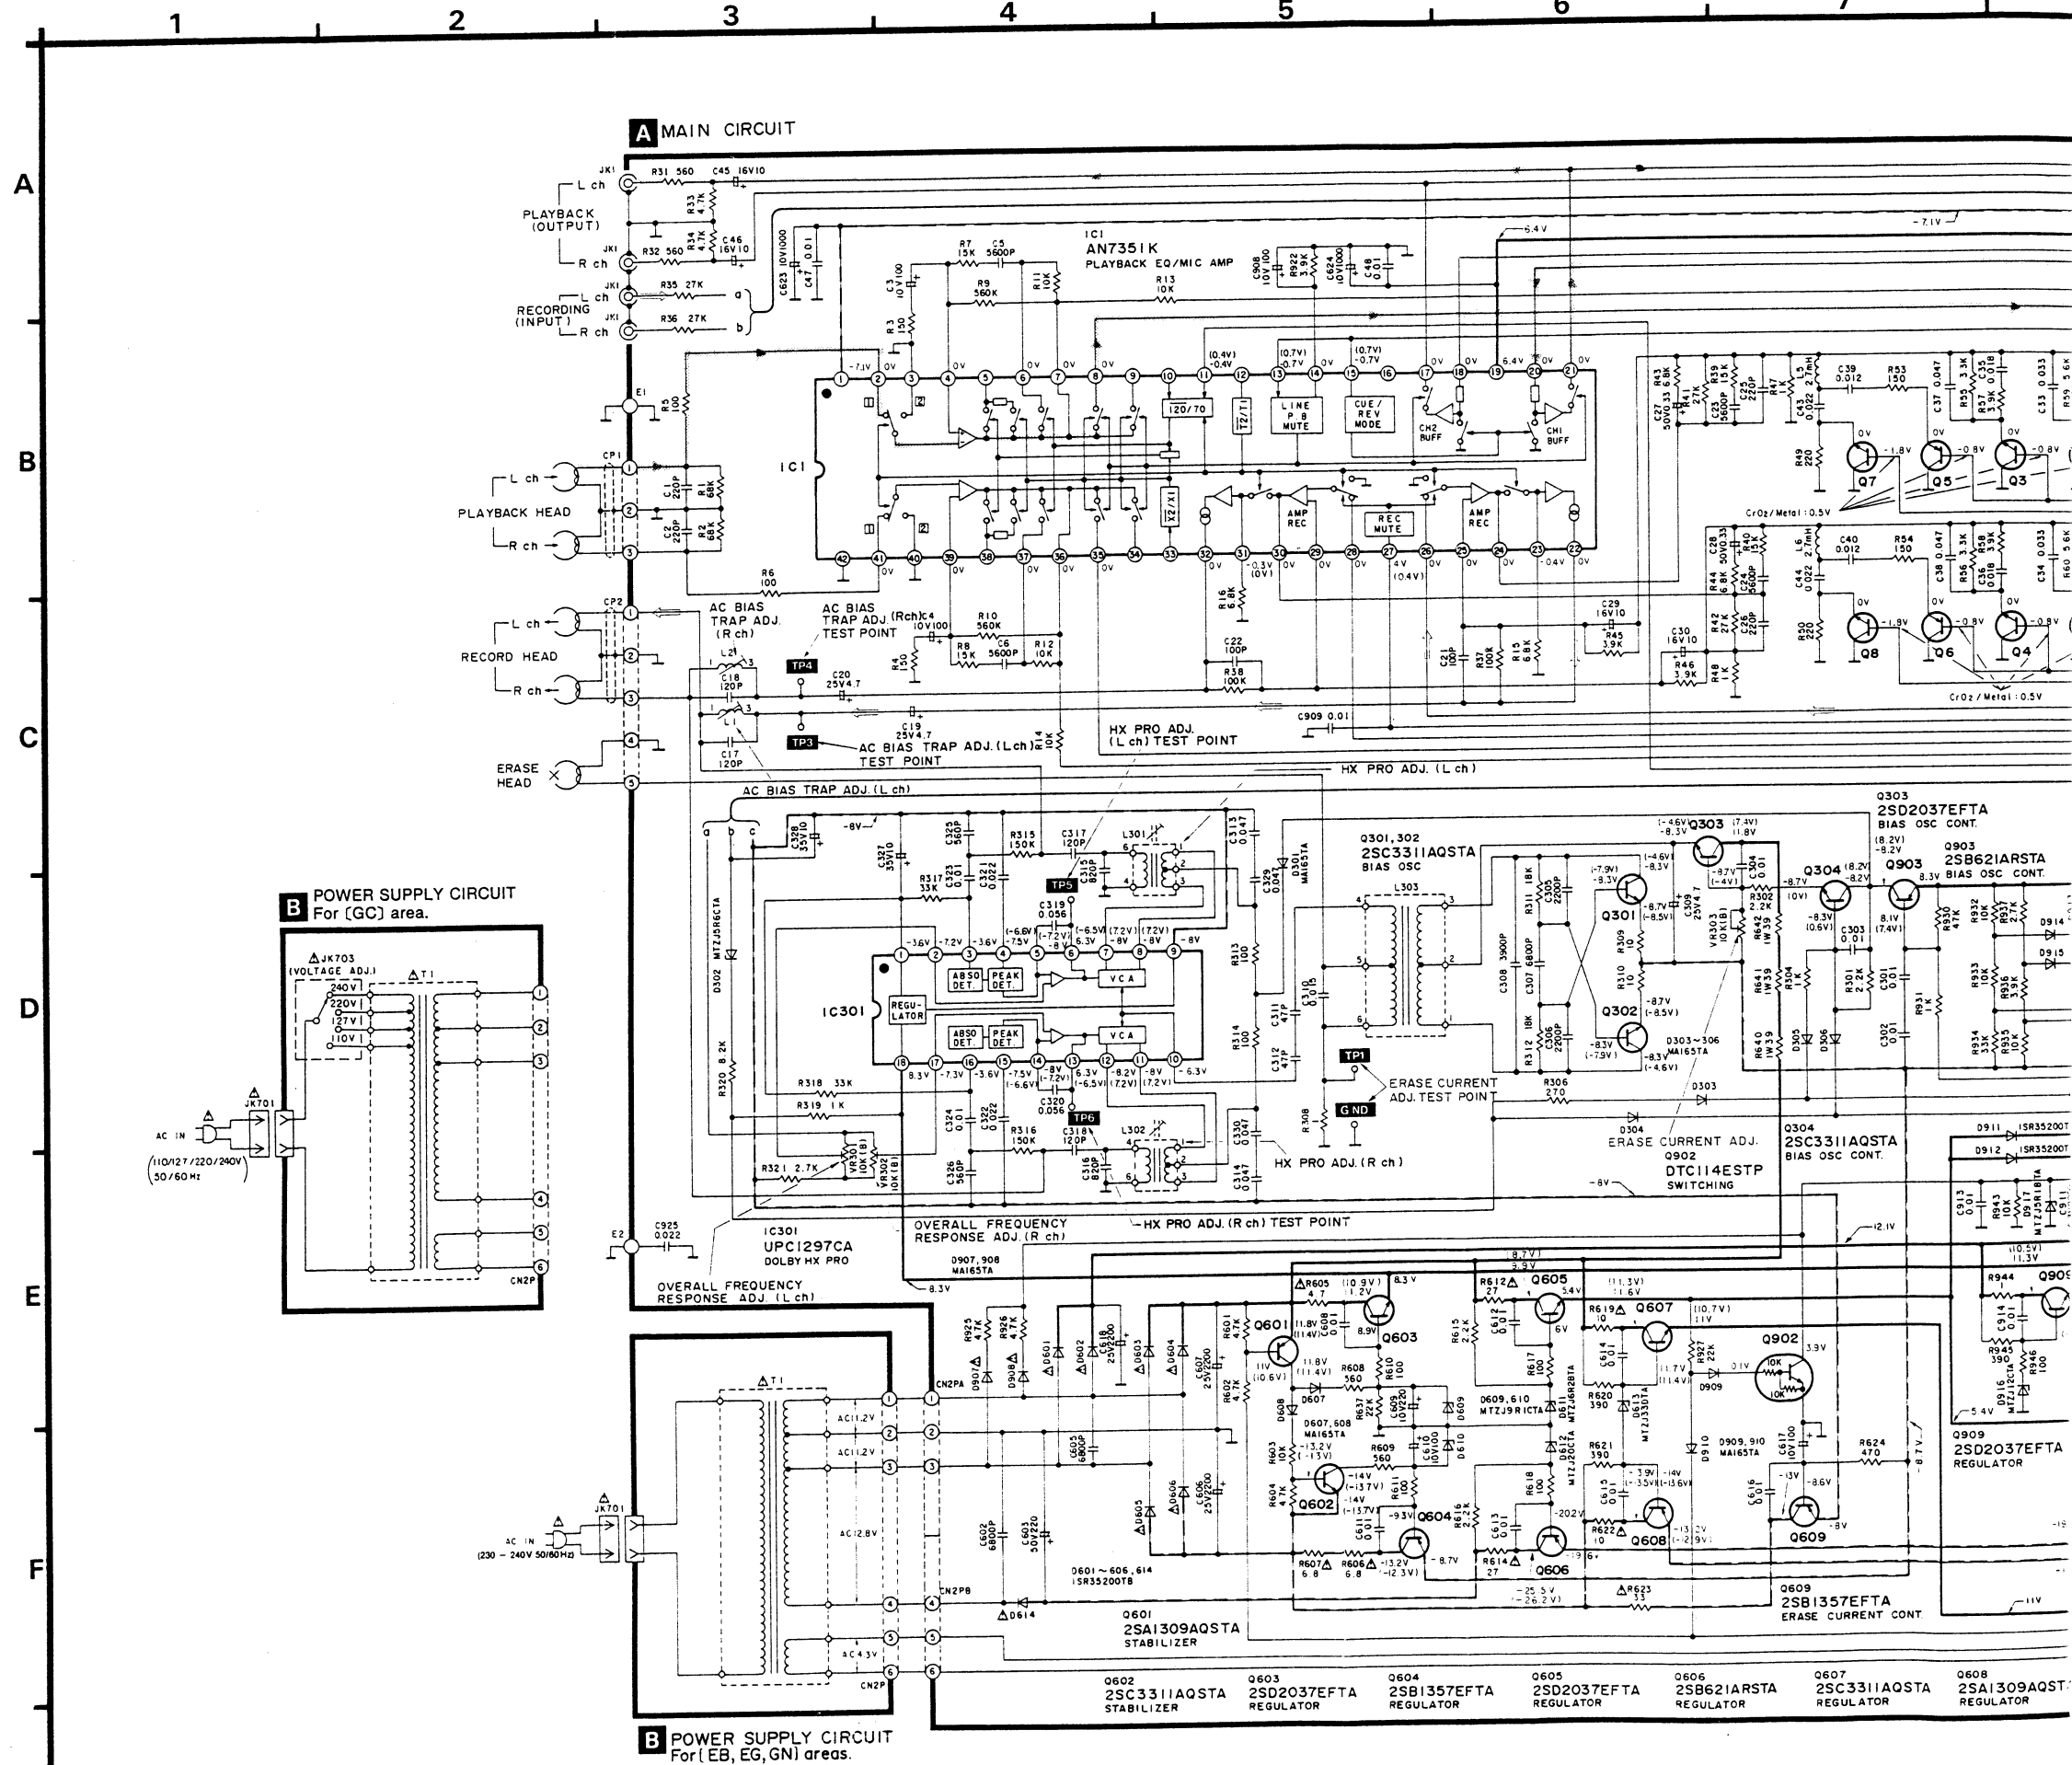

IC and LSI are sensitive to static electricity.
Secondary trouble can be prevented by taking care during repair.

* Cover the parts boxes made of plastics with aluminum foil.

* Ground the soldering iron.

* Put a conductive mat on the work table.

* Do not touch the legs of IC or LSI with the fingers directly.

D FL DRIVE CIRCUIT**E** REC LEVEL CIRCUIT**F** OPERATION CIRCUIT**G** MECHANISM CIRCUIT**H** MOTOR CIRCUIT**K** CAPSTAN**L** FG CIRCUIT

K CAPSTAN MOTOR(D.D) CIRCUIT

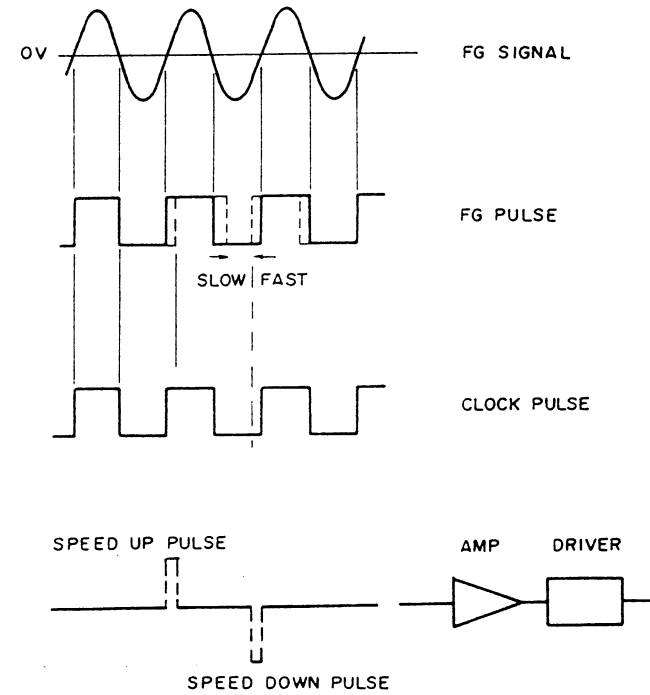

L FG CIRCUIT

TROUBLESHOOTING OF DIRECT DRIVE MOTOR

OUTLINE OF THE DIRECT DRIVE MOTOR SYSTEM

The capstan motor is actuated by the DD motor digital servo system. The FG pulse is generated after the detection of the zero crosspoint, and the reference signal generated from the quartz oscillator is compared with this FG pulse. From this comparison, the accelerated and reduced speed pulses are generated, causing the driving coil to function.

TROUBLESHOOTING OF DIRECT DRIVE MOTOR

Problem	Possible Cause	Check Points
1. The motor does not rotate.	1. No power supply (+12V). 2. The Hall element has failed (Current does not flow). 3. The ceramic (or crystal) does not oscillate.	• Check the voltage applied to the connector. • Check the DC potential on IC201 pins ②~⑦. * Check the waveform of IC201 pin ⑫.
2. The motor does not rotate properly. (When pressed, it stops at certain angles. Sometimes it does not rotate even if power is ON.)	1. The coil is broken or not properly soldered. 2. Output of the Hall element is not proper.	* Check the conductance of the coil. If normal, the resistances between IC201 pins ⑩~⑪, ⑪~⑫, ⑫~⑬ will reach 20 ohms. • Check the waveform of IC201 pins ②~⑦.
3. The motor is out of control.	1. The FG coil is broken.	• Check the waveform of IC201 pin ⑤. • Check if the FG coil is broken.
4. Abnormal wow.	1. Same as those described for problem 2.	

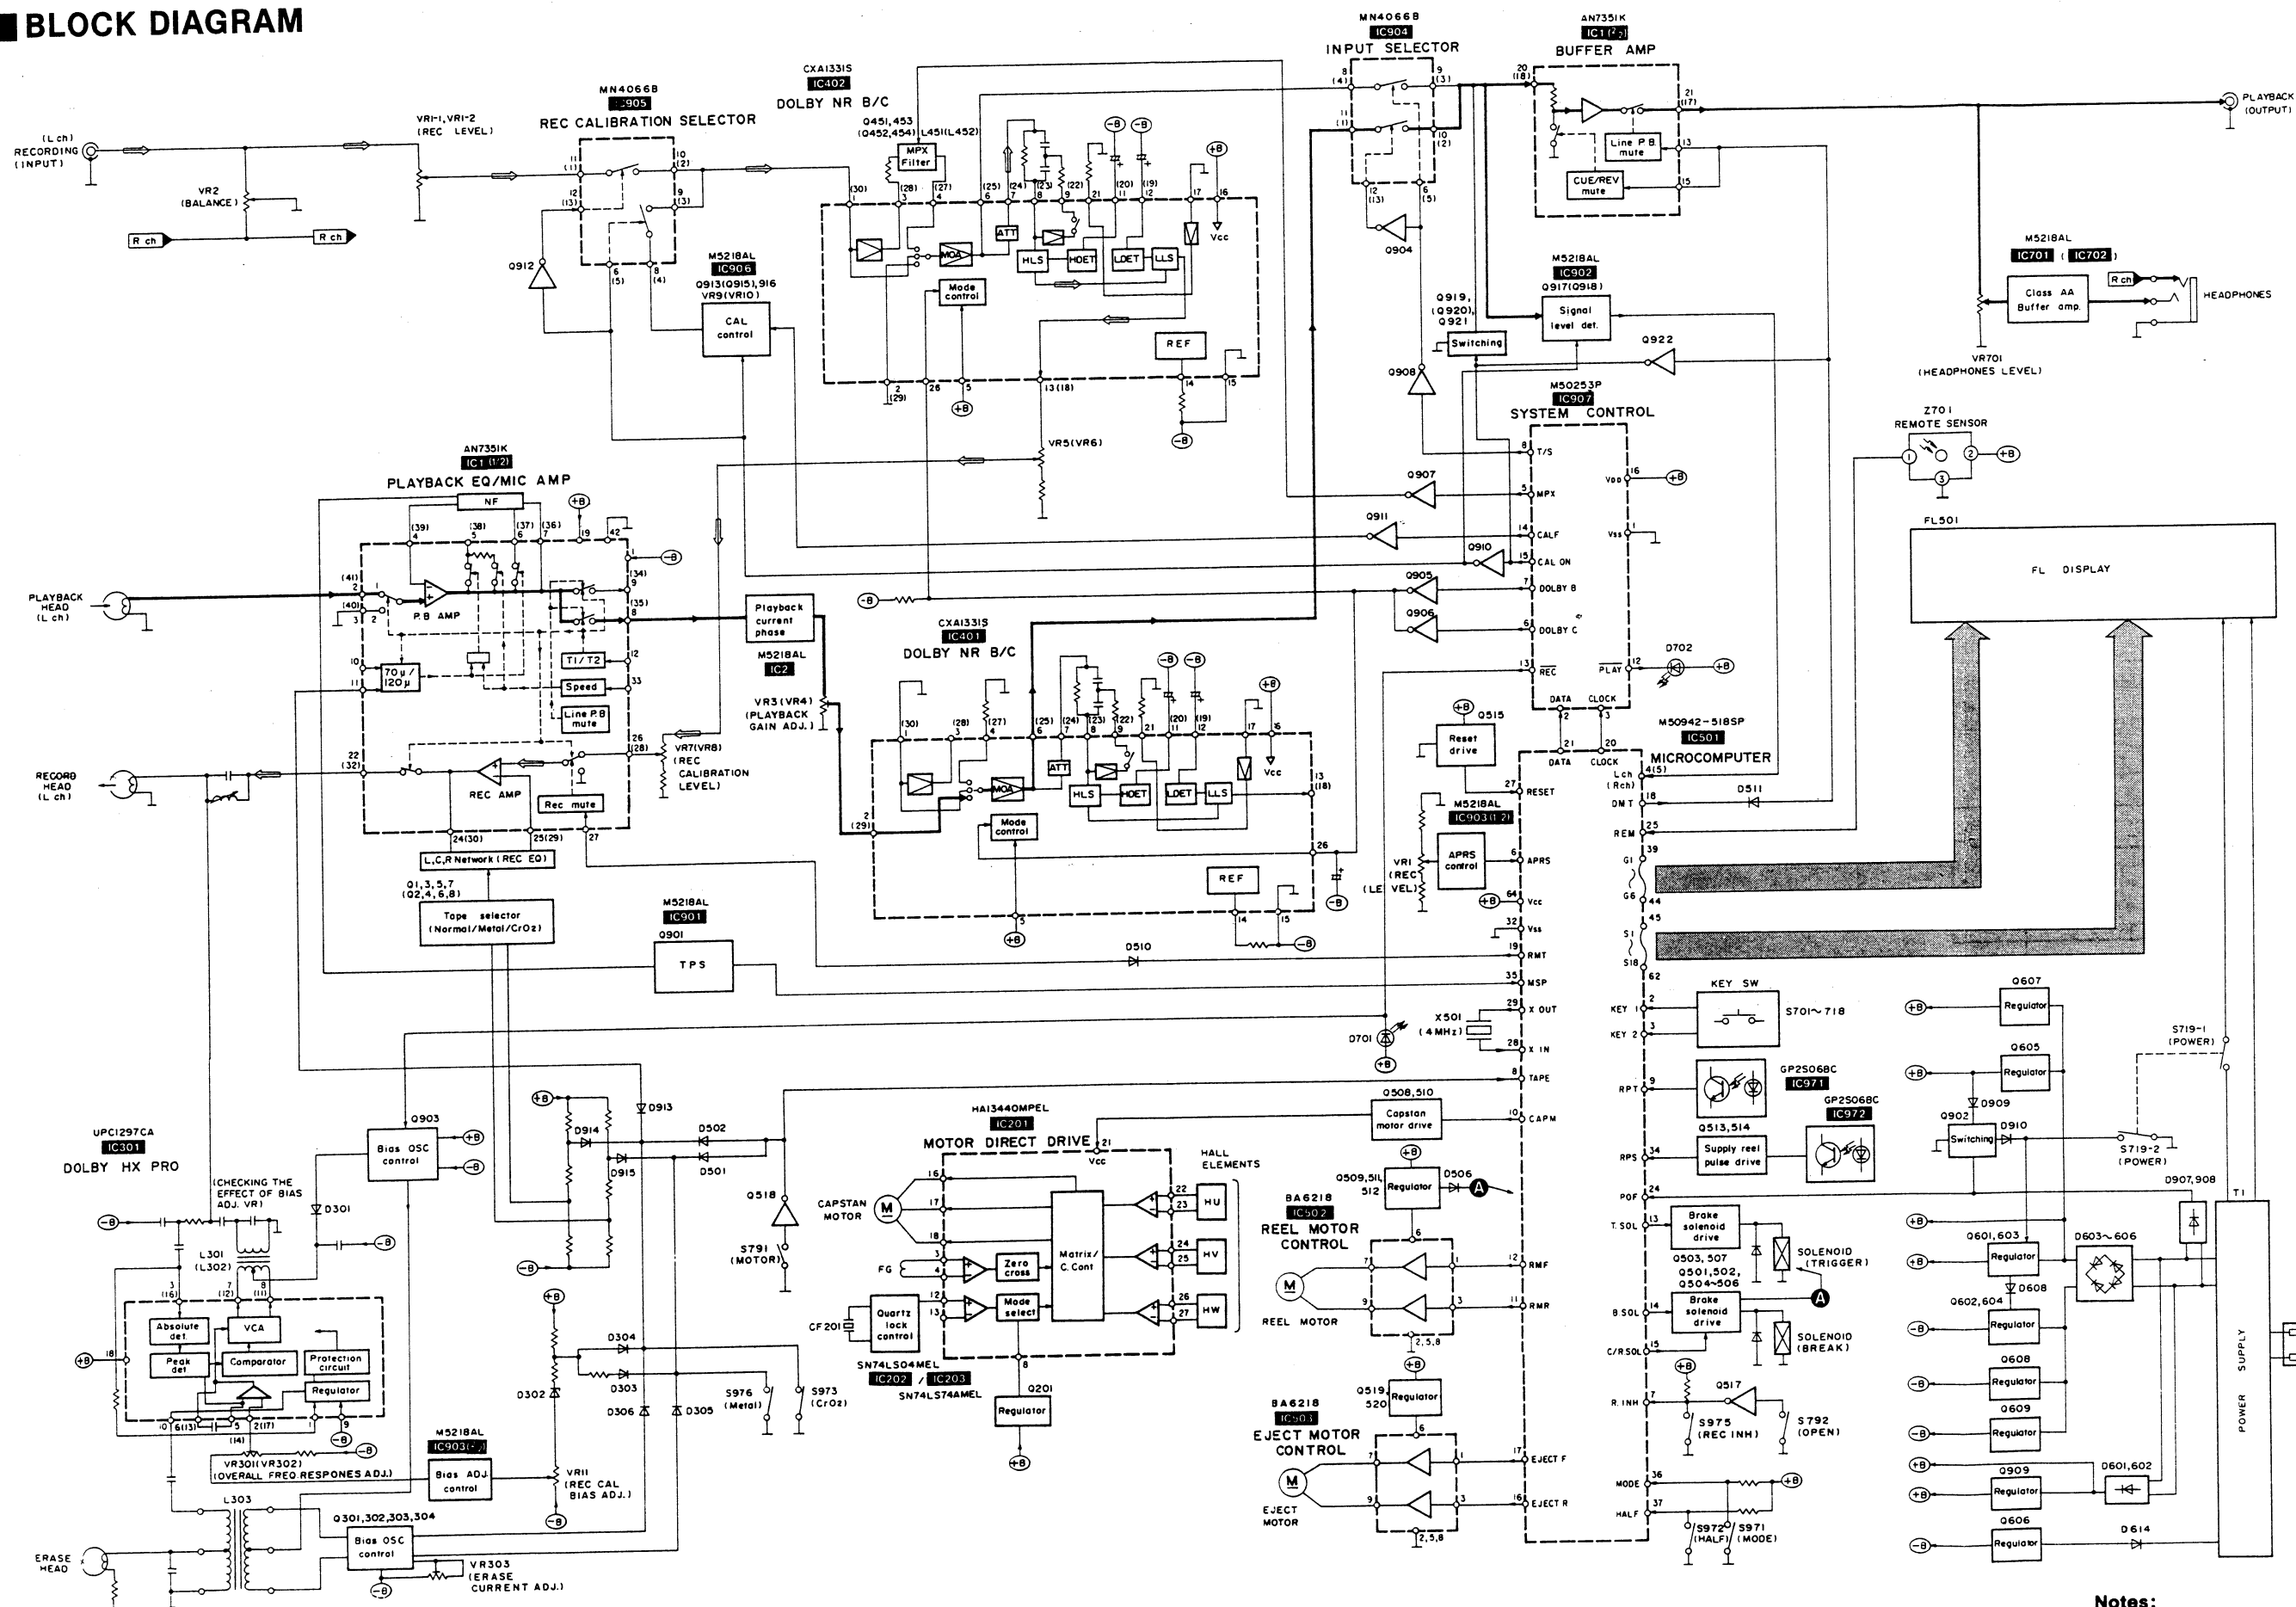

Note: Check the points marked with an asterisk (*) by removing the DD motor control P.C.B. and then connecting IC201 pin ② to GND with a lead wire. (After the DD motor control P.C.B. is removed, current will start flowing through the coil, heating the IC.)

RESISTORS & CAPACITORS

Notes : * Capacity values are in microfarads (uF) unless specified otherwise, P=Pico-farads (pF) F=Farads (F)
 * Resistance values are in ohms, unless specified otherwise, 1K=1,000 (OHM) , 1M=1,000k (OHM)
